Source to Image
oc new-app --name=vendor --image-stream=php:7.3 --code=https://github.com/navdeepsachdeva/DO180-apps/ --context-dir=php-helloworld

Details of Openshift Internal Image
oc describe imagestreamtags.image.openshift.io vendor:latest
oc describe istag vendor:latest | less

Set Startup Probe
oc set probe deployment/vendor --startup --period-seconds=5 -- cat /etc/passwd

Set Readiness Probe
oc set probe deployment/webmeet --readiness --failure-threshold=4 --initial-delay-seconds=2 --get-url=http://localhost:8080

Set Liveness probe
oc set probe deployment/vendor --liveness --failure-threshold=4 --initial-delay-seconds=2 --get-url=http://localhost:8080

Set deployment Memory/cpu
oc set resources deployment/vendor --requests=cpu=10m,memory=20Mi --limits=cpu=20m,memory=30Mi

Build Image manually outside openshift with Source code
./s2i build --as-dockerfile ./image_files/Containerfile --context-dir=php-helloworld
https://github.com/navdeepsachdeva/DO180-apps/ registry.access.redhat.com/ubi7/php-73 custom-php

podman login quay.io
podman push quay.io/username/custom-php:latest
podman push quay.io/username/custom-php:latest
oc new-app --image quay.io/username/custom-php:latest --name=custom-php

Manage Triggers on deployment
oc set triggers deployment/policy --manual
oc set triggers deployment/policy --auto
